

We are your Single Source Provider for All Your **Telecom** Services Needs

Telecommunications Services

The telecommunications landscape can be confusing, time consuming and unnecessarily expensive for IT managers who don't speak the telecom language. As your trusted telephony and telecom advocate, we speak the language of telecom and can help your business strategize, source, and implement the best carrier services solution for your business. We can help with everything from a legacy PBX transition to the Cloud, to optimizing your connectivity with SD-WAN. Our primary goal is to ensure that you receive the best possible solution that maps and scales to your business objectives.

WHY WORK WITH US?

E-TEL, your single source and *total* Technology Solutions Partner

E-TEL combines IT solutions experience with carrier services expertise to deliver you the optimal collaboration and network solutions to reach your business goals. When partnering with us, you receive:

- ✓ Experienced knowledgeable pros
- ✓ Detailed systems requirements analysis
- ✓ Multiple, unbiased provider options
- ✓ A single point of contact

Testimonial: "With all of the recent construction in our area we were experiencing unavoidable outages. Something had to be done. E-TEL delivered with *stellar* results. We were skeptical of the SD-WAN solution at first, but after the proof of concept we were hooked. We connected our current circuit, new backup cable internet, and a 4G passive router. The SD-WAN aggregated the connections, nearly doubled our bandwidth and gave us *completely seamless* failover. The reports and stats are a huge bonus for us, too."

Wide Area Network (WAN)

WANs empower remote users to communicate and collaborate securely under one network, no matter where they are. SD-WAN, EVPN, MPLS, VPLS, Broadband, FTTH, xDSL, fiber, copper EFM, HCF, 3G/4G, and point-to-point: All serve a specific purpose and each has strengths and weaknesses based upon an organization's geographic and budgetary constraints

SD-WAN

Ask us about SD-WAN and how it can improve your overall quality of *experience* and connections to the Cloud

ABOUT US

E-TEL designs and delivers Voice, Video, Data and Cabling solutions that help companies execute their strategic goals.

Our focus? Every business is unique, so we start with listening to the needs of our clients, and then exceed those needs in every way.

SIP Trunking

SIP Trunking allows businesses to reap VoIP-like benefits with legacy systems, without investing in new infrastructure. SIP has very disruptive pricing models that can drive significant savings to your bottom line while extending the useful life of your premise based hardware. Using SIP, you can consolidate all your communication systems, including data and voice into one bill and a single point of contact.

MPLS

Multiprotocol Label Switching (MPLS) is a highly scalable packet-switched private network solution that increases traffic performance in high usage networks, reduces network congestion and results in an overall better system admin and user experience.

Ethernet

Utilizing the right Ethernet carrier with the right cost effective solution allows organizations to deliver data, information, and applications securely over both Local Area and Wide Area Networks reliably and securely.

Broadband

Broadband today is about more than just high speed Internet connections in the office. In today's business environment, it's about having a connection wherever your employees need it. Whether DSL, Cable, or FTTH, Wi-Fi connectivity, or Mobile Broadband, all broadband networks are not created equal. Each carrier displays unique strengths and weaknesses depending on the region of the country you're located, your business structure, and your vertical.

“Business communications and carrier services are no longer just a required cost of doing business. In today's landscape, optimal communications services are a strategic differentiator and competitive advantage.”
